APPLICATION NO.	FILING DATE	FIRST NAMED INVENTOR	ATTORNEY DOCKET NO.	CONFIRMATION NO.
09/828,407	04/06/2001	Hiroaki Adachi	450100-03127	5169
20999	7590	12/28/2005	EXAMINER	
FROMMER LAWRENCE & HAUG 745 FIFTH AVENUE- 10TH FL. NEW YORK, NY 10151			SHIBRU, HELEN	
			ART UNIT	PAPER NUMBER
			2616	

DATE MAILED: 12/28/2005

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary	Application No. 09/828,407	Applicant(s) ADACHI ET AL.	
	Examiner HELEN SHIBRU	Art Unit 2616	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 31 October 2005.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-16 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-16 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 31 October 2005 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☒ All b) ☐ Some * c) ☐ None of:
1. ☒ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Response to Arguments

1. Applicant's arguments with respect to claims 1-16 have been considered but are moot in view of the new ground(s) of rejection.

The drawings filed on 10/31/2005 are now acceptable by the examiner.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 1-16 are rejected under 35 U.S.C. 102(e) as being anticipated by Newman (US Pat. No. 6,154,600).

Regarding claim 1, Newman discloses a video editing device (see fig. 1 and fig. 5) for use with a recording and playing device operable to allow video material recording and playback and to allow non-linear editing of the video material (see col. 6 lines 13-24 and col. 7 lines 25-48), comprising:

frame processing (see fig. 5 non-linear editor (200)) means for retrieving a video frame that is a basic construction unit of the video material from said recording and playing device, which stores video material to be edited and for performing frame processing on the retrieved video frame (see col. 7 lines 49-66 and col. 8 lines 20-46);

control means for controlling said frame processing means such that at least two types of frame processing (see fig. 14 transitions (596), effects (598), paint box (600), drawing (602), character generator (604), video underlay (606), still photo underlay (608), graphics (594)) by said frame processing means are performed upon the retrieved video frame in parallel (see col. 9 line 1-col. 10 line 47, col. 11 lines 1-39, col. 14 lines 10-39, col. 17 lines 19-35, fig. 6B, and abstract), and

frame storage means for storing a plurality of video frames after said frame processing means completes all frame processing frame-by-frame upon the plurality of video frames and for sequentially outputting the plurality of video frames (see fig. 13 master storyboard to tape and col. 17 lines 5-18);

whereby the video frames are output from said frame storage means in real-time (see col. 11 lines 16-62).

Regarding claim 2, Newman discloses said control means causes frame processing by said frame processing means to be performed in non-real-time manner (see col. 11 lines 31-62).

Regarding claim 3, Newman discloses frame processing means comprises:

at least one image processing means for predetermined image processing on individual video frames (see fig. 5 and 6B and col. 7 lines 49-66 and col. 8 lines 20-46 and fig. 13 fine editing in storyboard (556), modify transition (558), and add graphics and audio overlays (560));

first storage (see fig. 13 place shots in storyboard (552)) means interposed between said recording and playing device and said frame processing means (the video frames are stored in the first storyboard from record shots (552) and edited in fine editing in storyboard (556), modify

Art Unit: 2616

transition (558), and add graphics and audio overlays (560) in fig. 13. The storyboard is a working portion of the media buffer (216) in fig. 5 and see col. 16 line 65-col. 17 line 16); and

second storage means (see fig. 13, another storyboard) interposed between each of a plurality of said frame processing means (see col. 16 lines 45-col. 17 lines 18. The tasks are inter-cyclical and the consumer can create another storyboard. See also fig. 9-12 and col. 14 line 40-col. 16. The video data is processed and store in buffer and process it again from the buffer), with said control means

controlling (see fig. 6A and 6B) said recording and playing device, said first and second storage means, and each of the frame processing means such that at least two types of processing of video frames between said recording and playing device (see col. 8 line 48-col. 9 and col. 10),

said first storage means, said second storage means (see col. 15 lines 3-55), and image processing on video frames in each of said image processing means are performed in parallel (see col. 8 lines 48-67), and

further controlling said frame storage means such that the plurality of video frames a stored in said frame storage means in no special order are output in a predetermined order (see col. 12 line 55-col. 13 line 4).

Regarding claim 4, Newman discloses input means for inputting an editing schedule along a time axis (see abstract);

with said control means creating processing management data representing a dependency relationship between the kind of frame processing performed on each video frame and each frame processing based on the editing schedule input through said input means (see col. 9 line 31-col. 10 line 24), and

controlling said frame processing means operable to be executed based on said processing management data (see col. 10 lines 49-67).

Regarding claim 5, Newman discloses control means stores a plurality of said created processing management data (see col. 9 lines 1-31);

selects executable frame processing from said plurality of stored processing management data (see col. 11 line 63-col. 12 line 30); and

controls said frame processing means in order to execute said selected frame processing (see col. 12 line 56-col. 13 line 35).

Regarding claim 6, Newman discloses control means defers execution of readout processing when said selected executable frame processing is processing for reading out a video frame from said recording and playing device (see fig. 7-8 and 13, and col. 13 line 36-col. 14 line 39 and col. 17 lines 5-17), and

selects a plurality of sequential video frames from video frames to be read out at the time when a plurality of said deferred-execution read-out processing are gathered and then reading out the plurality of selected video frames from said recording and playing device for storage in said first storage means (see col. 9 lines 32-67 and fig. 13).

Regarding claim 7, Newman discloses image processing means comprising:

a first image processing portion constructed by hardware (see abstract and col. 18 lines 30-59); and

a second image processing portion constructed by software (see abstract, col. 17 lines 19-30 and col. 18 lines 30-59).

Claims 8 and 15 are rejected for the same reason as discussed in claim 1 above.

Claim 9 is rejected for the same reason as discussed in claim 2 above.

Regarding claim 10, Newman discloses first and second storage means which can store video frames are used (see claim rejection 3 above);

said frame processing step comprises:

at least one image processing step for predetermined image processing on individual video frames (see claim rejection 3 above);

a first writing step for reading out video frames from said recording and playing device and then writing them in said first storage means (see claim rejection 3 and fig. 13);

a first read-out step for reading out video frames from said first storage means and then providing them to any of image processing steps (see claim rejection 3 and fig. 13);

a second writing step for reading out video frames processed at said frame processing step and then writing them in said second storage means (see claim rejection 3 and fig. 13); and

a second read-out step for reading out video frames from said second storage means and then providing them in any of the image processing steps, and at least two types of frame processing predetermined at said first and second writing steps, said first and second read-out steps, and said image processing steps are performed in parallel, and the plurality of the video frames stored at said frame storage step in no special order are output in a predetermined order at said frame output step (see fig. 9-13 and claim rejection 3).

Claims 11-14 are rejected for the same reasons as discussed in claims 4-7 respectively above.

Regarding claim 16, Newman discloses a video editing method for editing source video data recorded on a recording medium, comprising the steps of:

playing said source video data in frames and performing frame processing on said played frame video data (see col. 8 lines 27-46);

storing the frame video data on which said frame processing is completely performed and outputting said stored frame video data as output video data (see fig. 13); and

controlling said frame processing such that each frame of said output video data is real-time video data (see col. 11 lines 16-62);

wherein at least two types of frame processing are performed in parallel on a frame-by-frame basis upon a single played video frame (see fig. 14 transitions (596), effects (598), paint box (600), drawing (602), character generator (604), video underlay (606), still photo underlay (608), graphics (594), col. 8 lines 48-67, col. 9 line 1-col. 10 line 47, col. 11 lines 1-39, col. 14 lines 10-39, col. 17 lines 19-35, fig. 6B, and abstract).

Conclusion

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to HELEN SHIBRU whose telephone number is (571) 272-7329. The examiner can normally be reached on M-F, 8:30AM-5PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, JAMES J. GROODY can be reached on (571) 272-7950. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
